

# Transportation Transformation

When we look back through the last century of transportation history, we begin to wonder where transportation will be in another century from now. With that in mind, develop a vehicle that you think will be popular 100 years from now.

## Materials:

Crafting Supplies (toilet paper rolls, bottle caps, etc.)

Paint / Coloring Supplies

1. Pick your favorite color and paint the “body” portion of your vehicle.
2. Create accessories for your vehicle (lights, wheels or wings, seats, etc.). After those are complete, set aside if dry time is needed.
3. Create your vehicle’s essential components (motor, passenger area, etc.). After those are complete, set aside if dry time is needed.
4. Once each piece is dry, start constructing your vehicle.
5. Once you have constructed your vehicle, try thinking of a particular year when your vehicle would be used and any other details a consumer would want to know 100 years from now.
6. Share with others around you.
